

Natural Cellular Defense FAQs

Zeolite is the Active Ingredient in Waioara's Natural Cellular Defense

Doctors and nutritional experts consider Natural Cellular Defense to be the most important nutritional breakthrough in history!

The Zeolite mineral has a honeycomb-like structure that acts like a cage trapping toxins at the cellular level. Zeolite is negatively charged by nature so when ingested into the body it attracts all the positively charged heavy metals, toxins, and other harmful chemicals like a magnet.

After the toxins are bonded with the Zeolite structure they are naturally removed from the body through the urinary tract.

Supplement Facts	
Serving Size: 3 drops	
Servings Per Container: 100	
Amount Per Serving	% Daily Value*
NCD Zeolite™ 24mg †	
4,5 di-cyclo, disilico, dimagnesium, dialumino, oxo, trihydrate	
*Percent Daily Values are based on a 2000-calorie diet.	
†Daily Value not established.	

Q. How Much Zeolite Should I Take?

A. The recommended dosage is 10 drops three times per day for ten days, then 3 drops three times per day after that. There are 15ml per bottle

(1 bottle will last approx 12 days)

Natural Cellular Defense FAQs

Natural Cellular Defense - FAQ's

Q. *Who manufactures Liquid Zeolite?*

A. Waiora is the only company in the world with the rights to Liquid Zeolite and other Zeolite Technology. The product, *Natural Cellular Defense*, is manufactured exclusively for Waiora at a facility adhering to certified Good Manufacturing Practices (CGMP) as set forth by the food and drug administration (FDA).

Q. *Is Liquid Zeolite a Drug?*

A. Liquid Zeolite is not a drug, it's a natural supplement. Originally it was planned to go through the FDA drug approval process in order to get Liquid Zeolite approved as a drug. However, the time-consuming process proved to be more than it was worth, as it would have taken 3-5 years.

It was then introduced to the chairman of Waiora's Scientific advisory board, Rik Dietsch. Recognizing the product to be safe, 100% natural and non-toxic, Dietsch knew it could be brought to market much faster and at a much lower cost as a nutritional supplement rather than a drug.

Q. *How does the Natural Cellular Defense work?*

A. The Zeolite in the *Natural Cellular Defense* attracts and traps small highly-charged particles that fit into the pores and channels of the Zeolite cage. This includes heavy metal toxins. The *Natural Cellular Defense* has been shown to remove mercury, lead, cadmium arsenic and other heavy metals.

Q. *Are there any side effects of Liquid Zeolite?*

A. NO!! Liquid Zeolite has a special cage-like structure that works so efficiently at trapping the toxins and heavy metals that no side effects are felt. One common complaint about Liquid Zeolite, and this goes for most detoxifying supplements, is **dehydration** because of the volume of toxins being removed. For this reason it's strongly recommended that you drink plenty of water.

Q. *Why is detoxification of my body important?*

A. The average person is exposed to more toxins through water and air pollution, household cleaning supplies, pesticides, disinfectants, and food additives than ever before in human history. Thus, this leads to increasingly weakened immune systems.

Q. *How many drops of NCD should I take if I want to detoxify my body?*

A. The standard dosage for everyone is 10 drops of *Natural Cellular Defense* 3 times a day for the first 10 days. Zeolite remains active in the body for a period of six hours and then needs to be replenished.

Natural Cellular Defense FAQs

Once you have taken 10 drops three times per day for the first 10 days, then it's recommended you drop the dosage down to 3-5 drops 3 times a day on an ongoing basis to maintain the effects of Liquid Zeolite.

Q. *What interactions does it have with other medications, if any?*

A. If you are taking medications always consult your doctor before adding any supplements to your regimen. In the special case of **chemotherapy**, Liquid Zeolite is so effective in removing the toxins from the body that it's not recommended for use because **chemotherapy** uses toxic chemicals to poison the cancer. Please consult your doctor before adding it to your regimen as a supplement.

Q. *Is Natural Cellular Defense an Antioxidant?*

A. Zeolite (found in NCD) acts as a unique antioxidant in that it does not work like the traditional antioxidants, which, in essence, act as a way to take up the excess free radicals. What Natural Cellular Defense does is simply traps the free radicals in its complex structure. It inactivates the free radicals and, again, eliminates them from the system. In this way it acts complimentary to the traditional antioxidants that absorb the free radicals into their system because they have an unpaired electron.

Q. *Can Natural Cellular Defense really balance pH levels in the body?*

A. Zeolite acts as what we would call a local buffer. Wherever it is, it buffers the system towards slightly alkaline (pH 7.35 to 7.45), which is a perfect buffer for the optimum pH for the human body that we want. Research has also shown that, in a way that is not entirely clear, zeolite acts to regulate the immune system, either up-regulating it or down-regulating it according to the situation. This is very important in a world in which most people's immune systems are seriously and continually being compromised.

Q. *Why does the Natural Cellular Defense sometime look, taste or smell differently?*

A. The Zeolite in NCD is an all-natural mined product. As such, there will be some variability as to its excess mineral content. Although these are very slight variations, they can cause great differences in the taste, smell and color of the product.

Q. *Why is some of the product tinted brown or green?*

A. The zeolite is a naturally-mined mineral. Because it is mined, its pigment qualities can be affected by outside elements like time of year and air and water, most specifically. The color variations of Zeolite can and do range from an off-white/beige color to a light green. Although these are very slight variations, they can cause great differences in the organoleptic properties of the product (taste and smell). Additionally, some mineral may darken in solution (ie. iron). Because of this, some of the NCD can have a brownish tint. These variations in

Natural Cellular Defense FAQs

the excess mineral content are negligible and cannot be considered as a source of the mineral.

Q. *Why are other mineral products consistent while the NCD may be different from one bottle to the next?*

A. Most multi-mineral products use formulations of single, purified minerals. These are known quantities that may be entirely consistent. The NCD uses a natural, mined product that contains natural variation of its mineral content. While the amount of the zeolite is standardized and remain constant in the product, the excess minerals may change.

Q. *Can the plastic from the bottle leach into the product?*

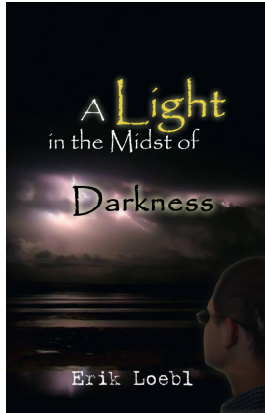

A. No. We use a high-density bottle that is resistant to leaching and there are no components in the NCD that are known to degrade plastic. We have had the bottle independently tested for plastic leaching and the results showed no leaching.
